

Symantec™ Validation and ID Protection Service

Prevent unauthorized access to sensitive networks and applications

Data Sheet: Authentication

Overview

Sophisticated network attacks have rendered simple password authentication insufficient to protect an organization against unauthorized access to its network and applications. The ramifications of unauthorized access to confidential information are dire: non-compliance, financial penalties, and theft of intellectual property.

Symantec™ Validation and ID Protection Service (VIP) is a leading cloud-based strong authentication service that enables enterprises to secure access to networks and applications while preventing access by malicious unauthorized attackers.

Features

- **Cloud-based infrastructure**—Secure, reliable, and scalable service delivers authentication without requiring dedicated on-premise server hardware.
- **Transparent risk-based authentication**—Leverage device and behavior profiling to block risky logon attempts without changing the legitimate user's logon experience
- **Multiple two-factor credential options**—Deploy one-time-password credentials in a variety of hardware, software, or mobile form factors
- **Free mobile and desktop device credentials**—Support for over 850 Android™, iOS®, Blackberry™, Windows® Phone, or J2ME™ devices
- **Out-of-band support**—Authenticate users via SMS text messages, voice phone calls, or email
- **Self-service credential provisioning**—Deploy strong authentication to endusers without requiring IT helpdesk or administrator configuration or intervention
- **Enterprise infrastructure support**—Integrates with popular enterprise VPNs, webmail, SSO applications, and corporate directories
- **Web-based application integration**—Add strong authentication using the VIP web services API in your preferred programming language

Benefits

Strong protection

Augment password-based logons with an additional layer of authentication, be it Intelligent Authentication device and behavior profiling or through a hardware or software-based credential. Symantec VIP helps organizations prevent unauthorized access to sensitive networks and applications, comply with data protection regulations, and enforce security best practices.

Reduced costs and complexity

Deploy strong authentication without the expense of deploying and maintaining dedicated on-premise authentication infrastructure. The Symantec VIP cloud-based approach allows organizations to quickly and easily deploy strong authentication without up-front capital expenditures.

Flexibility to meet diverse needs

Tailor your use of strong authentication to balance the cost, convenience, and security. Symantec VIP's broad array of authentication options allows an organization to select the right authentication approach to deliver protection for a variety of users and use cases. Options range from traditional one-time password (OTP) credentials to using device ID and risk-based analysis to invisibly authenticate known users exhibiting expected logon behavior, or a combination of both.

Scalable and reliable

Grow your use of strong authentication to large user bases without deploying additional dedicated authentication hardware. The Symantec VIP cloud-based infrastructure delivers carrier-class scalability and reliability to enable your organization to support millions of users easily and cost-effectively.

Future-proof

Attackers constantly change tactics. Your organization requires authentication solutions that can address these challenges, both now and in the future. The Symantec VIP

cloud-based approach enables easy delivery of new capabilities, in addition to integration with Symantec™ Global Intelligence Network, Symantec™ Endpoint Protection, Norton™, and Intel® Identity Protection Technology (IPT)-enabled computers; allowing you to stay ahead of emerging threats.

Credential options

Deployment scenarios

Secure remote access to corporate information

Symantec VIP enables enterprises to deliver secure remote access to corporate networks and applications, thus providing:

- **Improved productivity**—Enable employees to access corporate data and work anywhere, anytime
- **Better decisions**—Deliver time-critical information to increase business agility and responsiveness

Business partner access to enterprise extranets

Symantec VIP enables companies to securely collaborate with partners while guarding against unauthorized access to sensitive intellectual property, enabling:

- **Accelerated time to market**—Reduce the time required to leverage partners and their capabilities
- **Increased trust**—Partners are more willing to share sensitive information when they know it's protected

Self-service customer portals

Businesses can leverage Symantec VIP's strong authentication and monetary transaction monitoring to protect consumers' online accounts, resulting in:

- **Increased customer confidence**—Address security concerns to increase online service adoption
- **Reduced Fraud Costs**—Help prevent unauthorized transactions to reduce the occurrence of fraud
